

## Water Quality Agreement

**Home Inspection Services** has inspected my well and (or) has provided me the brochure **Own a Home with a Private Well?** My choice for the next step regarding understanding the drinking water quality is choosing the testing below indicated by placing my initials adjacent to my choice.

<p><b>Advanced Environmental Health Scan</b> – I am choosing this testing because I prefer to check every available potential contaminant. \$1400.00</p>
<p><b>Environmental Scan</b> – I like this very thorough scan of my water which provides testing including Herbicides and Pesticides and Heavy Metals that concern me. \$725.00</p>
<p><b>Health Scan</b> – <i>I understand that this testing is what ETR Laboratories has designed based on their experience of which contaminants are most often found in private well water. This scan is especially important if there is odor, taste or color to the water or if the physical inspection of the well suggests inferior construction and/or maintenance.</i> \$425.00</p>
<p><b>Comprehensive Scan</b> - The physical inspection of the well suggests that the well is properly constructed and maintained <b>AND</b> there is no odor, color or taste detected in the drinking water. Therefore I am choosing this scan which is most likely adequate to detect contaminants present in private well water. \$295.00</p>
<p><b>Comprehensive Plus Pesticides Scan</b> – The Comprehensive Scan (above) come close to meeting my water quality testing needs. However, I have a concern about pesticides being present in the well water. \$370.00</p>
<p><b>Standard Scan</b> – My concern regarding the well is to meet banking and regulatory needs regarding the well water on this property. I understand that this testing has been successful at meeting banking criteria and, where applicable, government agencies. I understand that it is my responsibility to do more testing in order to know about parameters not included in this scan. \$250.00</p>
<p><b>Other Testing</b> - In addition to the choice initialed above I would like to have the water checked for the following contaminants (prices vary according to testing requested):</p>
<p><b>Coliform and E. coli only</b> – I understand that there are may be other contaminants in the water and that this testing will not provide information on those. \$125.00</p>
<p><b>Not at this time</b> – It is my choice to forgo any water testing at this time.</p>

I understand that a water quality test provides information only on those potential contaminants which I request. I have been provided a list of the contaminants checked in the scan I am choosing. I am comfortable with the level of testing request above. I am agreeing to pay \_\_\_\_\_ to **Home Inspection Services** for the testing that is being requested. I understand that my report will be provided to me directly from ETR Laboratories by (circle all that apply) **email Mail FAX**. I know that I am encouraged to contact ETR Laboratories with any question, comments, etc. about the report by calling (800) 344-9977.
